

WINManage

Network Management System (NMS)

WINManage is a powerful network management system that empowers operation teams to manage and monitor RADWIN networks, interfaces and services.

Featuring highly customizable dashboards and reports, combined with in-depth monitoring & analysis capabilities, WINManage increases network uptime, enhances the user experience and enables informed decisions when performing network configurations, service provisioning, fault management, performance monitoring and user security management.

Customer benefits

- » Highly flexible and visual GUI
- » Unified management for RADWIN's products
- » Vendor agnostic for device monitoring
- » Fast and easy fault isolation
- » Asset and inventory tracking
- » Pay as you grow solution
- » Unlimited time period for data retention
- » Trial and 'Free of charge' packages

WINManage highlights:

- » On-premises / web-based network management
- » Support for all RADWIN PtP, PtMP and networking products
- » Feature rich Fault Management for greater up time
- » Device configuration and configuration backup
- » Device and interface performance monitoring
- » Task scheduling (e.g. configuration backup)
- » Multiple user access-level permissions
- » Highly flexible and customizable dashboards, reports, widgets and alerts
- » Multi-vendor equipment monitoring¹
- » Highly scalable architecture to support network growth
- » High availability through server redundancy
- » IDU support
- » Easy server upgrade
- » Backup to S/FTP
- » Automated managed device bulk software upgrade

¹ Applicable for selected protocols only – SNMP v1, v2c, v3 & SSH, ICMP

WINManage Features

Simplified Operations:

- » All-in-one network monitoring platform
- » Unlimited number of user-defined dashboards
- » Automated Network Discovery
- » Full-text search on retained data
- » Unlimited historical data retention time
- » Device bulk configuration & restore
- » Device bulk software upgrade
- » Performance report automation

Fault Management in a Click

- » Network wide view in a single dashboard
- » Root cause analysis with context
- » Proactive alerts via user defined thresholds & actions remediation
- » Customize the report and troubleshooting view

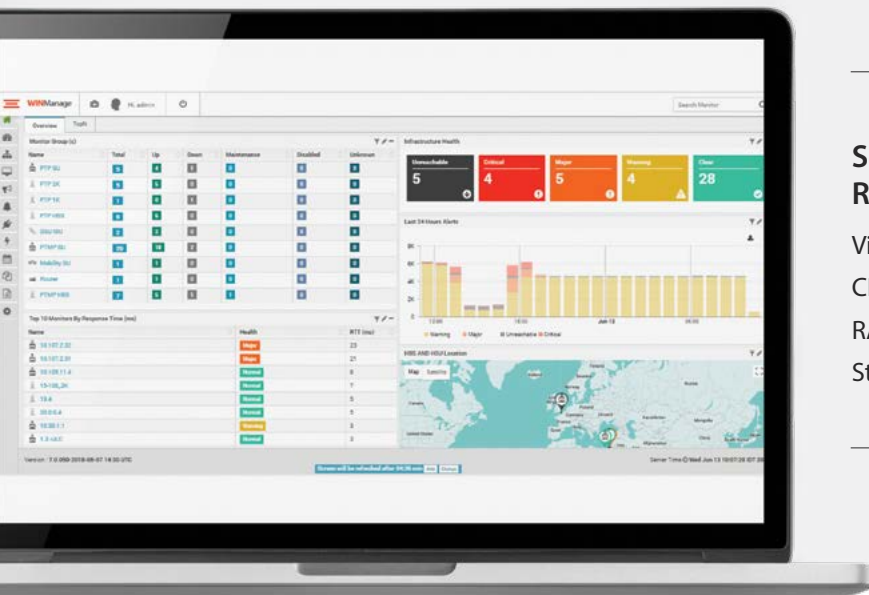

Enhanced User Security

- » Multi-user access-level permissions
- » Permission per feature access for system integrity
- » Audit log for operational tracking
- » Easy integration with active directory (LDAP) and RADIUS

Scalable Architecture

- » Remote and distributed polling agent
- » System redundancy package (optional)
- » Add new feature based on new plugin
- » Built-in database
- » Physical or virtual installation

Server and Poller System Requirements:

Virtual / physical: ISO

CPU: 8 Cores

RAM: 8GB

Storage: 50GB
